### **(PDF) Citefactor Journal Impact Factors List for 2014**

The impact factor is a statistically indefensible indicator of journal performance; it flatters to deceive, distributing credit that has been earned by only a small fraction of its published papers." As an illustrative example of the worthlessness of impact factors, consider two papers published in Science in December have analysed the 3D structure of RNA-protein complexes within the flu virus.

The impact factor of a journal is calculated by dividing the number of current year citations to the source items published in that journal during the previous two years. It is denoted as a ratio between citations and recent citable items published. You can either refer to the Journal Citation Reports (JCR) or the Scopus® database to find the impact factor of the journal.
