Modern Evolutionary Classification Answers

The answers to such questions provide the framework within which evolutionary psychologists operate. We will try to summarize some of these here. Psychology is that branch of biology that studies (1) brains, (2) how brains process information, and (3) how the brain's information-processing programs generate behavior.

Evolutionary Psychology Primer by Leda Cosmides and John Tooby

Evolutionary biology is the subfield of biology that studies the evolutionary processes (natural selection, common descent, speciation) that produced the diversity of life on Earth.In the 1930s, the discipline of evolutionary biology emerged through what Julian Huxley called the modern synthesis of understanding, from previously unrelated fields of biological research, such as genetics and ...

Evolutionary biology - Wikipedia

Evolution - Evolution - History of evolutionary theory: All human cultures have developed their own explanations for the origin of the world and of human beings and other creatures. Traditional Judaism and Christianity explain the origin of living beings and their adaptations to their environments—wings, gills, hands, flowers—as the handiwork of an omniscient God.

Evolution - History of evolutionary theory | Britannica

Evolutionary fitness is how well a species is able to survive and reproduce in its environment. Charles Darwin outlined the mechanisms of how species change, by natural selection and sexual selection.

Evolutionary Fitness: Definition & Explanation - Biology ...

Aristotle defines the end, purpose, or final "cause" (τέλος, telos) as that for the sake of which a thing is done. Like the form, this is a controversial type of explanation in science; some have argued for its survival in evolutionary biology, while Ernst Mayr denied that it continued to play a role. It is commonly recognised that Aristotle's conception of nature is teleological in the ...

Four causes - Wikipedia

Evolution - Evolution - Evolutionary trees: Evolutionary trees are models that seek to reconstruct the evolutionary history of taxa—i.e., species or other groups of organisms, such as genera, families, or orders. The trees embrace two kinds of information related to evolutionary change, cladogenesis and anagenesis. The figure can be used to illustrate both kinds.
